The main idea of this passage is to indtroduce ba wetlands and the importa lay in nat

Question mark (?) - unsure, don't understand it

What have you learn arned many plants and animals will disappea disappear.

Marshes & Swamps by Gail Gibbons

Marshes and swamps are wetlands. They are made up of soaked, wet ground or are covered with shallow water over a muddy bottom. From the mud, plants take root to send their stems, leaves and flowers up above the water. A marsh is made up of many grassy plants and sometimes a few shrubs. There are no trees or woody plants. Swamps have trees, bushes and shrubs. Most sy began as marshes when dead plants began to pile up and decay. In more mud was made. As the area became shallower, trees, bushes a took root in the mud. They grew to cover the marshy area was a second of the marshy area was became a swamp.

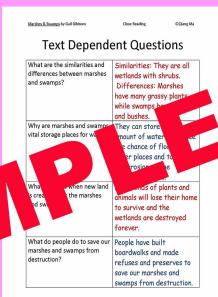

ts of water, these

as to survive. When ants and animals need to create more land to build on, they are destroyed shes and swamps have already been destroyed. ps disappear, so do countless numbers of plants and

Many people are working to save our wetlands from destruction. In some places boardwalks have been built over marshes and through swamps. That way people can walk into the natural beauty of swamps and marshes without disturbing the plants and animals that live there. Many of marshes and swamps have been made refuges and preserves to protect their unusual plant and animal life. For the visitor they are always full of surprises.
